EXERCISE 3

You will hear a man talking about the smallest reptile in the world. Listen and underline the correct word in brackets. (10x1=10 marks)

World's smallest reptile discovered in Madagascar

Scientists say they have discovered what could be the smallest reptile in the world. It is a kind of chameleon and is the size of a sunflower **1. (seed / sea / silk)**. Chameleons are usually around 35-40cm long. Scientists found two of the tiny lizards - a male and a female - in the mountains in **2. (southern / northern / western)** Madagascar. They are just 22mm long from nose to tail. The length of the male's body is 13.5mm. At first, the scientists thought the tiny reptiles were juveniles but later **3. (criticised / recognised / realised)** they were fully-grown adults. The scientists called the miniature **4. (creatures / treasures / features)** nano-chameleons. The scientists tried to find more of the nano-chameleons, but "despite great effort" could not find any others.

Madagascar is home to two-thirds of the world's chameleon species. Scientists believe they may have originated there. However, the chameleon's survival is threatened by deforestation on the **5. (highland / island / dryland)**. One of the scientists said the nano-chameleons are **6. (likely / lively / lucky)** to survive. He said: "The nano-chameleon's **7. (inhabitant / habitat / habit)** has unfortunately been subject to deforestation, but the area was placed under **8. (protection / conservation / prevention)** recently, so the species will survive." A study published by the journal "Nature Climate Change" stated that **9. (yearly / nearly / clearly)** all of Madagascar's eastern rainforest could disappear by 2070 if deforestation and climate change does not **10. (show / go / slow)** down. This would put many of the island's unique species in danger.
