Read the passage below and answer **ALL** the questions that follow.

Enter 'the devil's house': Sebastián Álvarez flies inside an active volcano

Wingsuit daredevil, the pilot Sebastián Álvarez, becomes the first person to fly in and out of an active volcano as he soars through the smoking crater at over 100mph in stunning footage filmed in Chile.

This is the heart-pounding moment a wingsuit daredevil **soared** through an active volcano after skydiving from a helicopter flying 11,000ft in the air.

Sebastián Álvarez, 36, who began his career flying for the Chilean Air Force, teamed up with fellow skydiver Dani Roman in order to fly through the 656ft-wide crater of Villarrica, also known as 'the devil's house', in Chile.

Footage shows the extreme sports enthusiast take multiple attempts to execute his mission before eventually managing to fly in and out of the smoking volcano at a speed of over 100mph.

During the clip, which was shared on November 29, Mr. Álvarez prepares for the dangerous **feat** ahead and tells viewers this is 'the most complicated project' he has worked on.

He says: 'It's definitely been the most complicated project that I've worked on due to the unpredictable factors.'

'For me the mind work was the most relevant aspect, understanding that I wanted to fly into an active volcano and to **attempt** to get out of it.'

'So, there is a moment during that flight I find myself in front of a wall.'

He adds: 'All factors are controllable or predictable. So, there is the human factor which in my case is training and there is the weather factor, which is predictable, but the volcano activity was completely out of our control.'

Being **undeterred**, the adrenaline junkie takes to the skies for a second and third attempt but the smoke emitted by the volcano and the winds are too strong and he is unable to complete the task.

The following day, Mr. Álvarez flies to a height of 11,482ft before jumping out of the helicopter once more.

The skydiver, who completed 500 jumps in preparation for his latest stunt, is able to gain enough speed and air pressure this time and dips into the crater before flying back out.

Mr. Álvarez has also completed a number of other stunts – including passing through the twin towers of Vina del Mar in Chile, BASE jumping from Mont Blanc in the Alps and carrying out a wingsuit flight on Cerro Manquehue, Santiago, Chile.

Villarrica, near the tourist resort of Pucon around 460 miles south of the capital Santiago, is one of South America's most active volcanoes. It has had historical eruptions dating back to 1558, and there have been a series of eruptions since December 2014.

The eruptions create a lava lake at its summit which can lead to small explosions, send jets of ash and gas hundreds of feet in the air and **generate** volcanic bombs. In March 2015, more than 3,000 people were evacuated from the area before the volcano spewed ash and lava over 3,000 feet in the air.
